- Facility Management

AVISTA's "CORE" Approach

Against the backdrop of dynamic global business environment, we believe that annual review on risk management and internal control systems solely for compliance purpose would no longer be sufficient for long-term business development and continuity. Corporates should deploy forward-looking plans and proactive strategies in order to cope with the everchanging challenges.

Drawing on our multidisciplinary professions in management consulting, risk and internal control advisory, financial consulting, investor relations and crisis management, AVISTA's "CORE" approach aims to prepare companies for unanticipated crisis, develop re-engineering plan for enhanced operational efficiency in addition to the basis of internal control review and risk assessment with continued evaluation.

How Can AVISTA Help?

A preliminary crisis diagnostic on the level of preparedness is provided to companies with the aid of our crisis preparedness assessment tool. To allow corporates to navigate through unexpected crisis, AVISTA helps develop a comprehensive crisis management plan enabling them to **P**repare for, **R**espond to, **R**ecover from, and be **R**esilient to crisis. Through the risk management and internal control systems review process, we explore and identify potential operation enhancement opportunities for companies. An in-depth risk-based organization change management review, featuring both external and internal factors, which is of fundamental importance to the sustainability of a business when it comes to changes, can further be conducted to re-engineer and streamline operation to prioritize resources, enhance productivity and minimize redundancy.
